EDUCATION

Malnad College of Engineering
Bachelor of Engineering (Computer Science and Business Systems)

Hassan, India
2022-2026

Experience

Software Developer Intern

Jan 2026 – May 2026

Eduainer

- Developed scalable full-stack features using the MERN , building RESTful APIs and dynamic React components
- Implemented JWT-based authentication and global state management using Context API ,optimized MongoDB schemas and backend queries for performance
- Deployed and maintained production-ready applications on Render, troubleshooting live issues and improving system stability

PROJECTS

BTC/ETH Grid Trading Bot Development

- Designed and developed a production-grade algorithmic grid trading bot for BTC/ETH using Python and the Binance API, implementing an indicator-free strategy based on supply and demand zones and market sentiment analysis.
- Built core trading logic for automated buy/sell order placement across dynamic price grids, enabling systematic capture of profit from BTC/ETH price volatility.
- Integrated Binance API for real-time market data retrieval, order execution, and trade automation, establishing reliable connectivity between the trading logic and live exchange infrastructure.
- Created a structured technical specification and master prompt framework to guide AI-assisted development, improving consistency and accuracy of the trading system's implementation.
- Conducted testing and validation of trade execution, order handling, and system reliability as part of the pre-deployment quality assurance process.
- Applied skills in Python programming, API integration, algorithmic trading strategy design, and financial market data analysis.

Customer behaviour analysis

- Executed a corporate-grade, end-to-end data analytics workflow, spanning data preparation (Python), transactional analysis (SQL), and strategic reporting (Power BI), mirroring the responsibilities of a professional data analyst.
- Modeled and Transformed a raw dataset using Python (Pandas/NumPy) to ensure data integrity and structural readiness, simulating complex data cleaning and transformation required for modern business intelligence platforms.
- Developed and Ran Business-Driven SQL Queries to simulate key transactional scenarios, identifying critical insights into customer segmentation, loyalty drivers, and purchase patterns to inform marketing strategies.
- Developed an interactive Power BI dashboard translating raw data into actionable insights, cutting report generation time by 50%.
- Demonstrated the ability to translate technical findings into strategic business intelligence, effectively bridging the gap between raw data, analytical models, and actionable reports for enhanced organizational strategy.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript/TypeScript, HTML, CSS, SQL
- **Web Technologies:** React.js(MERN), Django, FastAPI, Prisma, REST APIs, Tailwind CSS
- **Infrastructure and DevOps :** Terraform, Docker, Kubernetes, AWS, GCP, CI/CD, Git/GitHub
- **Databases:** MongoDB, PostgreSQL
